Testimonial for Brent Foster at Tool-Plas Systems

Recently we had a situation that involved the need to verify some measurements on a mould that had been fully assembled. The mould in question was too large for our CMM to accept. We could tear the mould down into manageable components so we could use our CMM and then re-assemble the mould. Or we could load it up and ship it to an outside service with a larger CMM. Neither Option fit in with our requirements, as both options required a lot of additional labour and time, which we didn't have. .

We were faced with finding a way to check the mould with as little down time and cost as possible. Two options that we first explored did not fit this bill.

Fortunately for us we had a third option that saved the day for us. We called Avid Quality Group Inc. and they came out to our facility that very day and checked the mould on the spot and gave us the measurements, which allowed us to address the problem immediately.

By being able to turn to Avid Quality Group Inc. we were able to save time and money over our other two potential options not to mention greatly improving our overall time to complete the requirements.

We certainly will move them up to the top of our Plan B list for all future issues
